

# Concept Map: Mobility Management Functions in Cellular Networks

## Evaluation

- Registration – Enables network access.
- Location Update – Updates user location.
- Tracking – Monitors user movement.
- Paging – Locates users quickly.
- Handoff Management – Maintains ongoing connections.

## Concept Relationships

- Registration → authenticates users → enables network access.
- Location **Update** → updates current location → supports accurate call routing.
- Tracking → monitors user movement → determines when location updates are needed.
- Paging → locates the user → delivers incoming calls and data.
- Handoff **Management** → transfers ongoing calls between cells → maintains uninterrupted connectivity.
- All **functions** → work together → ensure seamless user connectivity.
